

## File Transfer Management With Anti-Virus Integration

This document provides a brief, general description of the basic capabilities of the MOVEit Central file transfer management software by Standard Networks, followed by specifics on the advanced, real-time integration with AV solutions from market leaders McAfee, Symantec and Trend Micro, and how this enables Central to immediately halt the transfer of an infected file and automatically take appropriate follow-up action.

MOVEit Central is an enterprise automated file transfer management software solution. It is very good at automatically pulling, processing, and pushing files on a scheduled, event-driven or on-demand basis. MOVEit Central is used to reliably exchange files between a wide variety of internal and external systems, including MOVEit DMZ servers.

MOVEit Central does this using easy-to-create tasks — no programming is required. It can run multiple tasks simultaneously, and each can involve multiple files, multiple secure and non-secure transfer protocols, and multiple sources and destinations. Tasks can also process files using built-in MOVEit Central functions, including its commercially licensed OpenPGP encryption capabilities, and with custom VBS scripts.

MOVEit Central also provides advanced, real-time integration with these AV programs.

**AntiVirus by Symantec**  
**OfficeScan by Trend Micro**  
**VirusScan by McAfee**

If any of these applications detects a virus in a file that MOVEit Central is handling, then Central will *immediately* and *automatically* take the following actions.

**Stop** the transfer of that file.

**Delete** the file on the system that Central downloaded it from, or  
**Remember** the characteristics of that file and never transfer it again.

**Log** the name of the file, virus, and AV software, the date and time the infection was detected, and what Central did in response.

**Alert** the appropriate persons via email.

MOVEit Central also includes limited task, logging and notification capabilities when run with real-time virus detection products other than the three products listed above.

Additional information about the MOVEit Central software can be acquired by downloading the "MOVEit Central Managed File Transfer" and "MOVEit Central OpenPGP Option" PDF documents from the Standard Networks website and by contacting the company directly to ask technical questions, to make arrangements for a free 30-day onsite evaluation, and/or to request a licensing and pricing quotation.
